

High Spec Front Loader Series

If you are a tractor manufacturer or tractor owner searching for the perfect loader, look no further than The Sanyokiki Loadmaster.

With our exclusive patented hydraulic technology the Loadmaster Loader is the most technologically advanced loader in the world. It is the perfect blend of modern sophistication and style, while still retaining those timeless qualities of versatility, strength, durability, affordability, low maintenance and easy to use ergonomic controls.

Come and find out for yourself why the best tractor manufacturers in Japan continue to use Sanyokiki's Loadmaster Loader.

● Sleek Modern Design

Our re-designed loader has a more modern sophisticated look and feel. We have updated all the Loadmaster's parts including the steel pipes and stands along with the arm, the cranks, con rods and snap hitches.

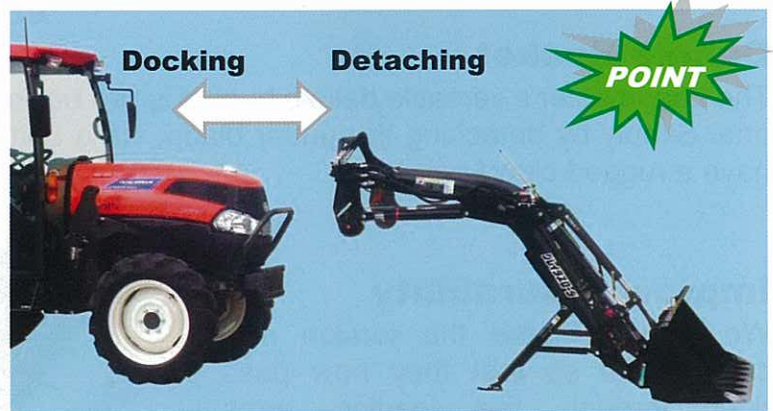

● Advanced Hydraulic System

We at Sanyokiki pride ourselves at making the highest quality hydraulic parts and machinery. We developed and patented all the hydraulic components such as the floating function, port relief and anti-void valves for the Loadmaster Loader which represents the pinnacle of around 45 years of experience, research and development.

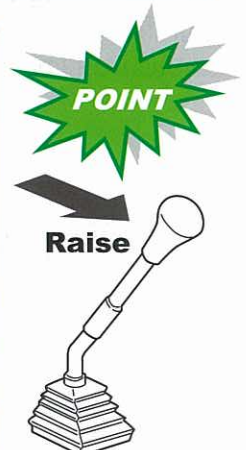

● Easy Docking

The Hydraulic Pressure Automatic Docking system allows you to use the controller to remotely align the docking pin holes making docking easier and safer.

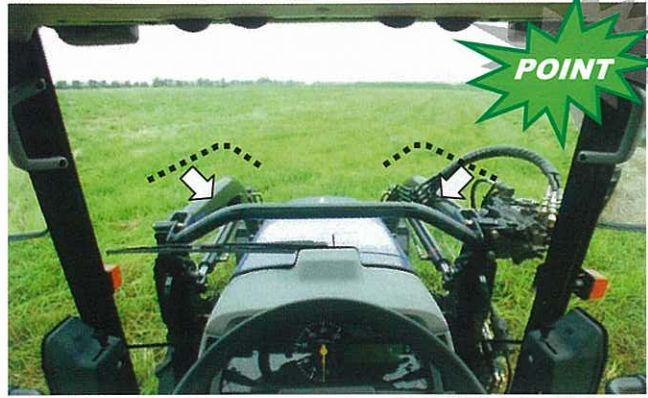

● Hydraulic Leveling System

Our original hydraulic system allows the front attachment to be raised and lowered parallel without specialized parallel links. We have been able to eliminate many of the complicated links of the old machine making it lighter and increasing the operators field of vision.

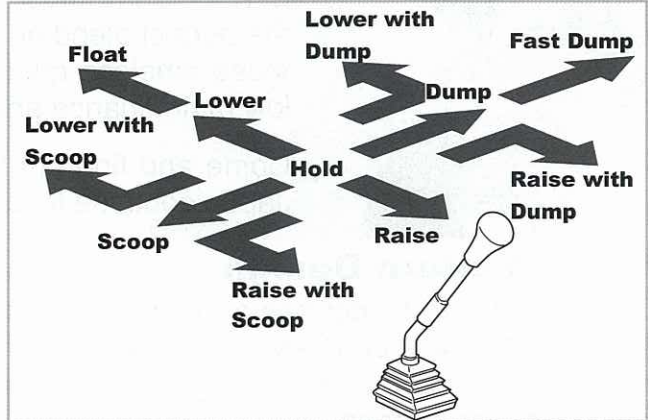

● Improved operating visibility

Components such as the lift arm, frame and bracket have been specially designed to increase work visibility when attaching or detaching the loader. The absence of a side frame also improves visibility around the front wheels and also makes everyday maintenance easy.

● Control System

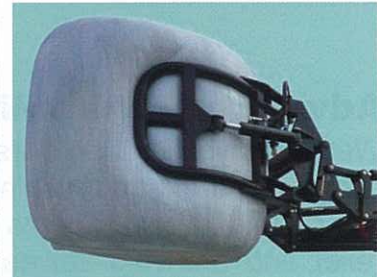

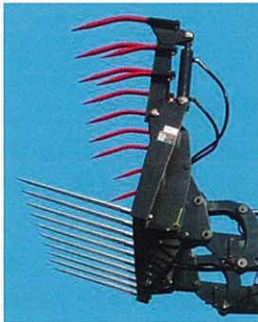

One lever controls the lift arm and front attachment for raising, lowering, scooping, floating, dumping. With the lever you can access eleven different work functions, including double actions such as lowering while scooping. It also allows you adjust operating speed from slow to fast to suit the job at hand.

● Sanyokiki HYLEC Kit

(Hydraulic + Electric)

The combination of our HYLEC (solenoid) valve and hydraulic cylinder increases your tractor's versatility by adding pushing, grabbing, side dumping and rotating to scooping and dumping work. The HYLEC Kit can be easily added to other loader attachments to broaden your operating range.

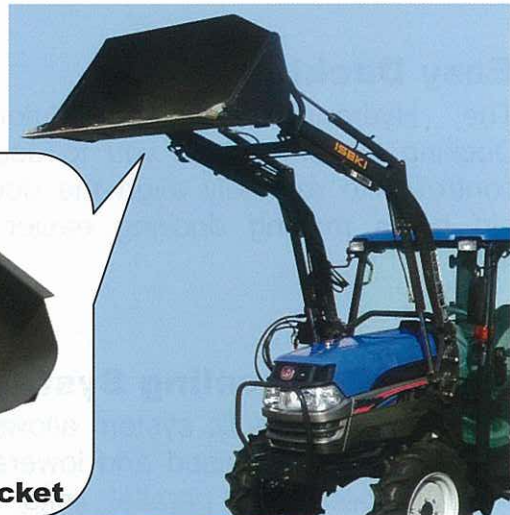

▲ Grapple Manure Fork

▲ Roll Grab

● Deluxe Bucket

The Loadmaster's versatile deluxe bucket is two buckets in one. Simply by detaching the under blade, via a bolt, you have a rugged claw bucket.

▲ Deluxe Bucket

● Improved Durability

We have updated the torsion arm connections so that they now pass right through the loading arms significantly increasing loader strength and durability.
